

# MAGNUM METALS PREMIUM METAL ROOFING

STRENGTH, STYLE, AND SUSTAINABILITY IN  
EVERY ROOF

Magnum Metals offers a premium metal roofing that combines durability, aesthetic appeal, and energy efficiency. Their products are designed to stand up to harsh weather conditions, including extreme winds, hail, and heavy snow loads. Magnum Metals' roofing solutions are crafted from high-quality steel and aluminum, ensuring long-lasting protection for residential, commercial, and industrial properties. With a wide variety of colors and finishes available, these roofs provide both functional and visual benefits, enhancing the overall curb appeal of any building.

One of the key advantages of Magnum Metals roofing is its energy efficiency. Their metal roofs are designed to reflect solar heat, which can significantly reduce cooling costs during hot summer months. This thermal efficiency not only helps homeowners and business owners save on energy bills, but it also contributes to a more sustainable environment by reducing reliance on air conditioning. Additionally, the longevity of metal roofing means fewer replacements and less waste, making it an environmentally friendly option in the long term.

Magnum Metals also prioritizes easy installation and maintenance with its metal roofing systems. The lightweight yet robust materials are easy to handle, allowing for quicker installation and minimizing disruption to the property. Their roofing systems require minimal maintenance compared to traditional roofing materials, as they are resistant to rot, mold, and pests. With a strong commitment to quality and customer satisfaction, Magnum Metals is a top choice for those seeking a reliable and long-lasting roofing solution.

Lets check out all the panel choices that Magnum offers and the different applications you might use them for.

## MAG PANEL

Mag Panel is Magnum Metals take on a traditional "Ag Panel" which is normally used in agricultural applications. Not only is it used for agricultural buildings and barns, it has become popular as a cost effective panel for residential roofing and buildings. It comes in a host of colors and is standard in 29 gauge but can also be run in 26 gauge as well.

## PBR PANEL

PBR Panel is what many would consider to be the standard for commercial and industrial uses. Because of its higher ribs and thicker gauges, PBR is what many would see on warehouses or larger buildings. Magnum carries this line in all of our popular colors and while the standard is 26 gauge it can also come in 24 gauge as well.

## PBU PANEL

PBU Panel is what we at Magnum consider to be "the perfect marriage" of our Mag Panel and PBR Panel. While it has lower ribs like Mag Panel, it also comes in higher gauges to be a tougher shell for your building. It would also be considered a commercial application and Magnum Metals carries it only in 26 gauge in a variety of colors.

## STANDING SEAM PANEL

Standing Seam would be considered Magnum Metals "top of the line" panel for the roofing application. It is a residential and architectural panel. Many would see this on higher end homes and buildings. Because it is a locking panel system, all of the fasteners are hidden and boasts of a look like no other. Available in 26 and 24 gauges and many colors, this is what many would consider to be the only way to go on a roof for their home or business.
